Clean
spaces
can help
save lives.

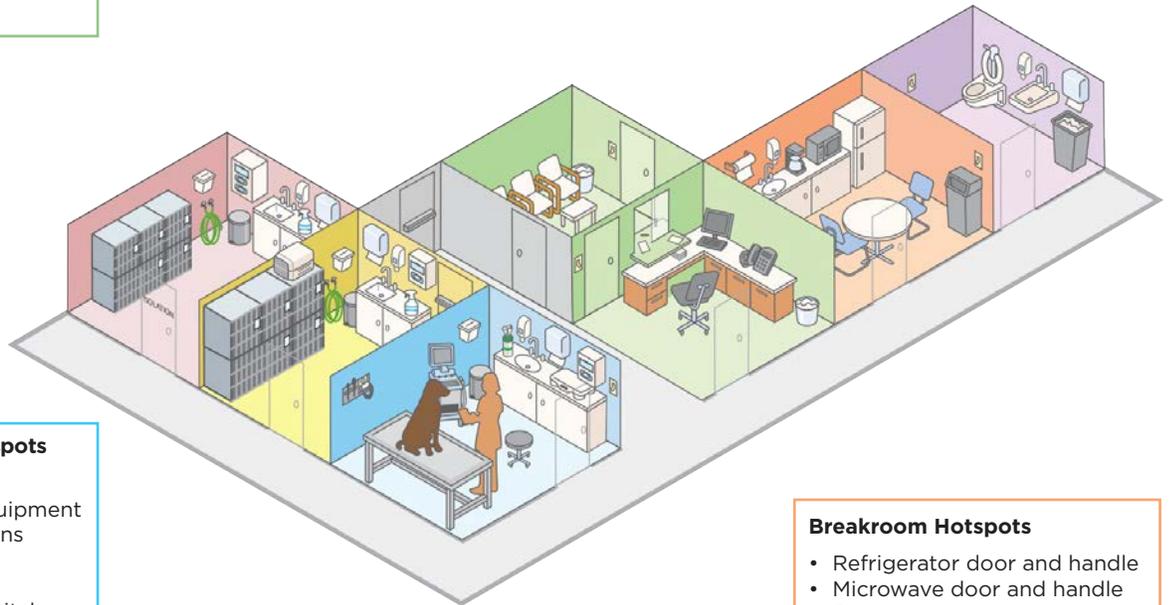

Germy Hot Spots in Veterinary and Animal Care Settings

Office/Waiting Area Hotspots

- Countertops and cabinets
- Telephones and remotes
- Keyboards and computer mice
- Waiting room chairs
- Doorknobs and light switches
- Floors

Restroom Hotspots

- Faucet handles
- Countertops
- Doorknobs
- Soap dispensers

Veterinary Care Area Hotspots

- Exam tables
- External surfaces of equipment
- Kennels, carriers and runs
- Countertops, sinks and cabinets
- Doorknobs and light switches
- Floors
- Bedding and blankets

Breakroom Hotspots

- Refrigerator door and handle
- Microwave door and handle
- Sink faucet handles
- Tables and countertops
- Doorknobs and light switches

Research has shown

- Almost 80% of infectious diseases are transmitted by touch.¹
- Patients can shed organisms into the environment, even if they don't show symptoms.
- Hard and soft surfaces are commonly touched sites and can pose cross-contamination risks.²
- Pathogens such as Salmonella, canine influenza virus, and canine parvovirus can survive on hard and soft surfaces for days, weeks, even months.³

American Animal Hospital Association (AAHA) Guidelines

AAHA has issued infection control, prevention and biosecurity guidelines for veterinary hospitals. These describe how to develop an infection prevention program, and include the following key sanitation recommendations:⁴

- Develop protocols, checklists, and monitoring programs for cleaning and disinfection.
- On surfaces, remove loose organic material first, clean with a detergent to remove visible soil, then disinfect using EPA-registered disinfectant.
- Clean and disinfect animal-contact surfaces, such as exam rooms and cages, between patients.
- Clean and disinfect reception areas and staff areas at least daily.
- Follow product label instructions to ensure that use is appropriate, concentration is correct and surfaces stay wet for the required contact time.
